Status of the claims

This office action in response to correspondence filed November 21, 2003.

Claims 1-24 have been canceled. **Claims 25, 28, 31 and 32** have been amended. **Claims 25-48** are pending in this application. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). **Claims 35-48** are withdrawn.

Withdrawal of Objections and Rejections:

The objection of **claim 28** because of an informality is withdrawn.

The rejection of **claims 25-34** under 35 U.S.C § 101 as being drawn to non-statutory subject matter is withdrawn.

The rejection of **claims 25-29** under 35 U.S.C § 112, first paragraph is withdrawn. The amino acid substitutions proposed by the applicant in the claims are conservative substitutions. A written description of the mentioned substitution has been provided in the specification on page 10, lines 20-23.

The rejection of **claims 25 and 28** under 35 U.S.C § 112, second paragraph is withdrawn.

The rejection of **claims 25-34** under 35 U.S.C § 103(a) as being unpatentable over Jakubowski in view of Shirik is withdrawn.

Examiner's Amendment:

An **Examiner's Amendment** to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles L. Leeck on February 13, 2004.

Examiner's Amendments to the Claims:

25. (amended) An isolated modified antithrombin protein having an H-helix, wherein at least one amino acid of the H-helix is [modified] substituted in order for the H-helix to have a more positive charge than an H-helix of a non-modified antithrombin protein.

28. (amended) The modified antithrombin protein of claim 25, wherein the at least one amino acid of the H-helix that is [modified] substituted in order for the H-helix to have a more positive charge than an H-helix of a non-modified antithrombin protein is in the region of amino acids 304-314 of the modified antithrombin protein.

39. (amended) The method of claim [38] 37, wherein the modified antithrombin has one or more amino acids in the region of amino acids 304-314 [modified] substituted in order to have a more positive charge than the non-modified antithrombin.

Conclusion
